The National Library of Medicine is the world's largest research library in a single scientific and professional field. The Library's holdings total nearly 1,300,000 books, journals, theses, pamphlets, prints, and microfilms. More than 70 languages are represented in the collection.

Holdings in the literature of biomedical and related sciences include: 315,000 monographs, 310,000 bound journal volumes, 285,000 theses, 168,000 pamphlets, 4,500 reels of microfilm, and 60,000 portraits and illustrations. About 18,000 serial titles are received each year.

Materials are collected exhaustively in some 40 biomedical areas and, to a lesser degree, in a number of related subject areas such as general chemistry, physics, zoology, botany, psychology, and instrumentation. The Library acquires new material at the rate of approximately 90,000 items a year.

2 **HOURS OF PUBLIC SERVICE***

Dr. John Shaw Billings

FORMER LIBRARY BUILDING

The Library was founded in 1836 as the Library of the Surgeon General's Office, U.S. Army. It was developed as a national resource under Dr. John Shaw Billings, Librarian from 1865-1895. In 1956, it became part of the Public Health Service under legislation introduced by Senators John F. Kennedy and Lister Hill and was officially named the National Library of Medicine.
